

# IGUZZINI PRODUCT CLEANING INSTRUCTIONS

## SAFETY PRECAUTIONS:

Cleaning should only be performed when the product is turned off and disconnected from the mains power supply.

Check that the product is not hot.

## GENERAL INSTRUCTIONS:

Products should be cleaned regularly according to the level of dirt in the installation environment. We recommend cleaning products at least once a year and not less than once every 5 years.

For normal cleaning operations we recommend using warm water (60°C max) or neutral, water-based, non-abrasive detergents.

Do not use abrasive cloths or tools to remove dirt.

Avoid using alcohol.

Avoid using chlorinated products.

Avoid using acidic or alkaline products.

Avoid using detergents containing solvents or alcohol.

## GUIDELINES FOR CLEANING DIFFERENT MATERIALS:

It is important to clean all the product surfaces properly so they do not become damaged and their photometric performance is guaranteed.

In particular, follow these instructions for the different surfaces specified below:

- Painted metal parts: use a damp, non-abrasive cloth and neutral, water-based, non-abrasive detergents.
- Aluminium reflectors: use a dry, non-abrasive cloth (see specific instructions below).
- Metallised thermoplastic reflectors: use a dry, non-abrasive cloth (see specific instructions below).
- Plastic parts: use warm water (60°C max) or neutral, water-based, non-abrasive detergents and always make sure that the detergent is compatible with plastic.
- Metal parts: use warm water (60°C max) or neutral, water-based, non-abrasive detergents.
- Glass covers: use warm water (60°C max) or neutral, water-based, non-abrasive detergents.

### CLEANING REFLECTORS:

- It is important to use rubber gloves.
- Make sure there are no particles in the area to be cleaned that may scratch its surface. If there are we suggest you remove them using compressed air.
- Clean with a dry, non-abrasive cloth.
- Clean off any stubborn dirt with a damp, non-abrasive cloth dipped in a demineralised water and neutral soap solution. Then rinse with demineralised water and let the surfaces dry completely before turning the product back on.  
Make sure the detergent is compatible with the product's surface material and treatment.
- Reflectors should be cleaned by moving the cloth up and down. Avoid circular movements.
- When cleaning a surface do not exert excessive pressure on it.

### ADDITIONAL INSTRUCTIONS:

Always check individual product instruction sheets for additional maintenance and cleaning instructions.
